

## **ABSTRACT OF THE DISCLOSURE**

2 An alarm manager on a Web browser for transmitting alarm manager provided by NMS  
3 (Network Management System) by simply operating as a dynamic HTML through a HTML  
4 document object provided by the Web browser, without a separate loading program, and a service  
5 method thereof, and a method of providing alarm information to the alarm manager. The service  
6 method includes the steps of: creating a header frame, a contents frame, and a data frame on the Web  
7 browser, in response to an alarm manager service from a user; requesting, at the data frame, the NMS  
8 to provide alarm information periodically, and managing the alarm information being requested  
9 when the alarm information is received; periodically checking, at the contents frame composed of  
10 dynamic HTML, whether the alarm information in the data frame is properly managed; and  
11 obtaining, at the contents frame, the alarm information being managed by the data frame, composing  
12 the alarm information in a data table system, and displaying the alarm information for the user to be  
13 able to confirm the alarm info.
